Product Description

BASIC USE

The ClearPath vestibule system provides reliable wireless sequenced activation of automatic vestibule doors.

The CP/STX and CP/STX-J receive a programming upgrade from the basic transmitters that enables them to be sequencing transmitters. They mount on the interior and exterior of the vestibule entrance and are capable of transmitting two separate signals with an

adjustable time delay between them to sequence vestibule doors one after the other from either direction.

The CP/TX-V is a dual transmitter that mounts in the vestibule between the doors allowing independent activation of each door.
