

608 Series Heavy Duty Switch Posts

PRODUCT DESCRIPTION

The 608 Series Switch Posts are designed to provide a free-standing activation device that can be installed in most locations for use with automatic pedestrian doors. The posts are 5" square x 40" tall and made from 1/8" thick tubular steel. The posts feature a rust resistant finish that is available in gray or bronze powder coating. The 2" cap is made of durable ABS, bringing the total height of the post to 42". Surface mount and inground mounting options are available (as shown above). A variety of switch and radio control options are also available.

QUALIFIED INSTALLERS

When installing this product to an automatic pedestrian door application, MS Sedco recommends installation by technicians who are certified inspectors by the American Association of Automatic Door Manufacturers (AAADM). All installations shall be compliant with applicable nationally recognized performance standards and building codes.

WARRANTY

MS Sedco activation switch products are warrantied for 3 years from date of purchase – terms apply.
